EVERFOX

# Cross Domain Solutions

**Defense grade high-assurance transfer and access solutions**

## A Proven Leader in Defense-grade, High-Assurance Cybersecurity

Everfox, formerly Forcepoint Federal, has been a trailblazer in defense-grade cybersecurity for over 25 years and we're just getting started. Our security solutions are designed to support the unique — complex missions and objectives undertaken by those who protect, govern, and ensure national resources and safety. We protect what matters most across the globe- from intelligence communities, defense departments, civilian agencies, and the critical infrastructure of national importance, we offer protection like no other.

Our suite of cross domain solutions empowers governments and enterprise organizations to use data safely, where and however their people need it. We protect data wherever it resides — supporting safe information access and sharing.

## Key advantages

### High-Assurance Cybersecurity

Domains, data, networks, and cloud designed to meet the most stringent security requirements and mission objectives.

### NATO and FVEY Nations Ready

Accredited deployments in the United States, Canada, Australia, New Zealand, and United Kingdom.

### Security When and Where It's Needed

Fostering continuity of operations with safe and secure management of data, digital identities, and cyber behaviors. Protect workers and critical data in the field or across the enterprise.

### Proven Solutions Helping Agencies Accelerate Their Zero Trust Mission

Modernizing cybersecurity programs, services, and capabilities to work with cloud-computing encironments and implementing multilevel zero trust architectures (ZTA).

### Raising the Bar

Everfox is a leading COTS developer with access and transfer solutions approved by the U.S. NCDSMO.

# Cross Domain Portfolio

**Cross Domain Solutions**
Access and Transfer information between multiple domains and sensitive environments.

**Access**

**Transfer**

Multi-level Web Browsing

Full Motion Video

Web Services Applications

Structured Data

Unstructured Data

One-Way Transfer

## ACCESS

**Trusted Thin Client (TTC)**
**Trusted Thin Client Remote (TTC/R)**

Multi-network access technology that provides simultaneous access and remote access to data on multiple networks from a single endpoint device.

## TRANSFER

**Trusted Gateway System (TGS)**
Multi-network access technology that enables safe, multi-directional unstructured file movement between physically separate networks.

**High Speed Guard (HSG)**
**High Speed Guard SP (HSG/SP)**

Facilitates secure, automated data trans-fer between multiple networks with exceptionally fast transfer rates.

**Control Center**
Graphic user interface for managing guards across your Everfox Cross Domain Enterprise.

**Data Guard**
**Cross Domain for Enterprise (EAR)**

Bi-directional and automated transfer of sensitive data and files between physically separate networks. Eliminates time-consuming manual transfers.

## CROSS DOMAIN–ENHANCED CAPABILITIES

**Trusted Mail System (TMS)**
COTS solutions that enable the policy-enforced exchange of emails between users on different networks.

**Trusted Print Delivery (TPD)**
COTS solution that provides a secure means to consolidate printing to a single printer on a more sensitive network.

**SimShield**
COTS fixed-format data guard with the ability to label, segregate, protect, and exchange data between systems.

## DIODES

**High Speed Verifier (HSV)**

Hardware-enforced security and verification at ultra-high speeds. Protect networks from attack with network separation, one-way data flows and trusted supply chains. Provides hardware logic validation of data syntax and semantics.

**Data Diode**

Rapid uni-directional and automated transfer of highly complex data to segment and protect networks and devices.

A → Data Diode → B
Network    Data Diode    Network

---
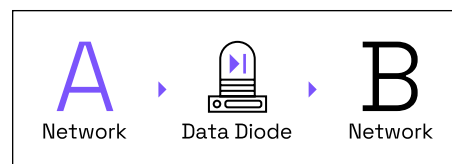

Our mission is to protect our customers against the most complex cyber challenges that exist across the globe today through an innovative, high-assurance approach that empowers them to operate in an ever-changing cyber landscape.
