

Hidden Signals Uncovered. Vulnerable Lives Protected.

Some threats don't break down doors. They hide in plain sight.

Across state and local government environments, the signals that point to serious harm, including exploitation and human trafficking, are often buried inside everyday digital activity.

It requires more than traditional monitoring, it requires intelligence.

With Everfox User Activity Monitoring (UAM), organizations gain visibility to detect hidden risk early, intervene faster, and safeguard the people who depend on them. Because when you can see the unknown, you can stop it.

THE MISSION:

Protect communities by identifying risk before it becomes harm.

For state and local government agencies responsible for safeguarding vulnerable populations, waiting for an incident is not an option. They need the ability to:

- Detect subtle behavioral anomalies
- Surface hidden threats
- Act with confidence and speed

The mission was clear: find what others miss, act before it escalates, protect the vulnerable.

THE CHALLENGE:

The greatest threats are rarely obvious. Exploitation networks and trafficking operations don't advertise themselves, they operate quickly, blending into normal patterns of activity. Traditional tools struggle to detect these signals, leaving organizations exposed until damage is already underway.

Without deep behavioral visibility:

- Dangerous activity can remain hidden
- Insider risk can grow unnoticed
- Safeguarding gaps widen
- Public trust can erode

Most organizations don't fail because they lack data, they fail because they lack clarity, and **when you can't see the risk, you can't stop it.**

“Everfox gave us visibility we never had before. It helped us act quickly and protect the people who needed it most”

- Senior Security Leader, Public Sector

THE RESULT:

Through passive monitoring, Everfox User Activity Monitoring (UAM) surfaces behavioral indicators as users interact with data, systems, and people. Providing analysts with the insight they need to make informed decisions before risk escalates.

In this deployment, these surfaced indicators pointed to activity consistent with organized exploitation networks operating below the radar. Equipped with this intelligence, analysts were able to intervene, helping prevent further harm and protect vulnerable individuals.

Everfox enabled:

- Earlier visibility into high-risk behaviors
- Analyst-led decisions grounded in evidence
- Faster, more confident intervention
- Stronger safeguarding oversight

This wasn't just monitoring, it was proactive protection.

THE IMPACT:

When the right people have the right insight, intervention becomes possible.

This is the real-world impact of turning hidden signals into decisive action.

Safeguarding isn't reactive, it starts with seeing what others can't.
