

SECURE THE AUTONOMOUS MISSION

Trusted Information Infrastructure for Autonomous & Coalition Operations

Military forces are rapidly accelerating the adoption and fielding of autonomous capabilities across land, sea, air and space. **Mission success depends on trusted information** moving securely between platforms, operators, AI systems and coalition partners at mission speed.

TELEMETRY

Real-time system and platform data

SENSOR

ISR and mission payload data

SATCOM

Critical comms across all domains

C2

Control commands and mission directives

AI

AI-driven insights and processing

THE FUTURE FORCE IS CONNECTED

Autonomous capability is reshaping military operations. Trusted information infrastructure enables you to:

FIELD FASTER

Accelerate autonomous capability

OPERATE TOGETHER

Enable joint and coalition missions

CONNECT SECURELY

Share trusted information across every domain

DECIDE WITH CONFIDENCE

Deliver trusted information at mission speed

Built for Defense, Ready at Mission Speed

Everfox enables defense organizations to adopt autonomous capability quickly and securely through trusted information infrastructure purpose-built for defense.

Rather than relying on software alone, Everfox reduces the attack surface through hardware-enforced separation (hardsec), protecting mission-critical information across both secure access and transfer solutions.

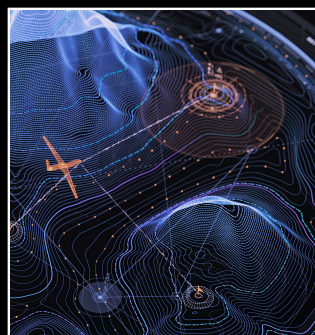

The result is trusted information that can move securely across classifications, domains, and coalition partners, without requiring years of bespoke integration.

ENABLING THE AUTONOMOUS MISSION

TRUSTED INFORMATION INFRASTRUCTURE

Protect the mission data that powers autonomous operations, AI-enabled systems and coalition missions

HARDWARE-ENFORCED SEPARATION

Reduce the attack surface through physical separation enforced in hardware logic, eliminating reliance on operating systems

SECURE INFORMATION SHARING

Enable trusted movement of mission-critical information across security domains, classifications, and allied partners

RAPID CAPABILITY ADOPTION

Support commercial-speed defense innovation by enabling programs to deploy trusted autonomous capabilities without lengthy bespoke development

MISSION OUTCOMES

- Accelerate autonomous capability adoption
- Enable trusted mission data across unmanned systems and coalition operations
- Reduce attack surface with hardware-enforced separation
- Secure information sharing across classifications and operational domains
- Support AI-enabled decision-making with trusted information
- Deliver operational capability at mission speed

THE TRUSTED INFORMATION PLATFORM FOR DEFENSE

Autonomous systems are transforming military operations. Trusted information enables them to succeed. Everfox provides the trusted information infrastructure that autonomous and coalition missions are built on. Helping defence organizations securely move mission-critical data across platforms, domains and partners, enabling trusted decisions at mission speed.

Speak with an Everfox expert to learn how we help defense organizations secure autonomous missions, or visit everfox.com/autonomous
